

As a truckdriver that drives over the road. I don't have access to local TV and Radio stations at all times. I need my XM radio to keep informed of weather conditions and Things that effect my job. It is difficult enough to drive with traffic in Congested areas safely, I don't have time to adjust my radio to find a weather advisory. Plus they don't play weather conditions 24/7 like XM. With XM I can pre program to weather stations in the area's that I will travel in that day. This is a service that I PAY for and I honestly don't feel that The should be governed By the FCC, This is a service that I PAY for and if there are things on there that I don't approve of I Have free will and I can change the channel.
